INDEX.

Africa, South, Mr Livingston's researches in, 164.
Agassiz, Professor, recent researches on fishes, by, 295.
Agate, the structure of, described, 359.
Almaden Mine, California, 364.
Animal and vegetable fibre, remarks on, 317.
Animals, colour of, by Professor Agassiz, 192.
Animals and plants, transition from one to the other, 290.
Arctic currents, remarks on, 292.
—— Expeditions, observations on, by Augustus Petermann, 159.
Arragonite, formation of, 190.
Aurora borealis, the light of, noticed,

Barry, Dr Martin, on animal and vegetable fibre, 317. On the penetration of spermatozoa into the interior of the ovum, 326. Researches in embryology, by, 327. On the Hungarian nightingale, 369.
Biography of Baron Leopold von Buch, 1.
Black, W., Esq., the South African Fish River Bush described by, 72, 195.
Boué, M. Ami, on the palæohydrography and orography of the earth's surface, 298.
Brochantite, formation of, 190.
Brodie, Sir Benjamin, the Anniversary Address to the Ethnological Society of London by, 352.
Buch, Baron Leopold von, Noggerath's biography of, 1.
Bunsen, Professor, remarks on volcanoes, by, 276.

Cairo, a mineral water discovered near, described by Leonard Horner, Esq., 284.
Calc spar, formation of, 190.
Cave, Mammoth, of Kentucky, description of, 119.
Chambers, Robert, Esq., on the eyeless animals of the Mammoth Cave of Kentucky, 107.
Cleavage, the origin of, by H. Clifton Sorby, 137.

Dalton, Dr J. C., an account of the Proteus anguinus, by, 352.
Dalzell Dr Allen, on the colour of hair, 329.

XUM

Dana, James D., on the eruption of Mauna Loa, 111. On the changes of level in the Pacific Ocean, 240. On the question, whether temperature determines the distribution of marine species of animals in depth, 267.
Davy, Dr, observations on fish, in relation to diet, by, 225.
Daubeny, Dr, on volcanoes, 276.
Delesse, A., researches on granite, by, 341.
Diopside, furnace product, 189.
Dove, Professor H. W., on the annual variation of atmospheric pressure in different parts of the globe, 123.
Dumont, M., on the classification of rocks, 272.

Earth, the mean density of its superficial crust, by M. Plana, 152.
Embryology, researches in, 327.
Ethnological Society of London, anniversary address of, delivered by Sir Benjamin Brodie, 352.
Evaporation and condensation noticed, 187.

Fish River Bush, South Africa, a description of, by Staff Assistant-Surgeon Dr Black, 72, 195.
Fleming, Professor, on the structure of rocks, 363.
Forbes, David, Esq., on the determination of copper and nickel in quantitative analysis, 131.
——— Professor Edward, on the mollusca of the British seas, 69. On some new points in British geology, 263.
Fossil bones of Nebraska, analysis of, 109.
Frog, the discovery of, in New Zealand, by Dr Thomson, 66.

Geology, some new points in British, determined by Professor Edward Forbes, 263.
Gerard, Alexander, Esq., on pendulum observations, 14.
Glacial action in North Wales, by Sir Walter C. Trevelyan, 193.
Glass, crystallization of, 189.
Globe, crystalline form of, by M. de Hauslab, 165.
——, its dimensions and figure, by Colonel Sabine, 148.
Goodsir, Professor, on the structure and economy of the Tethea, and an undescribed species from the Spitzbergen seas, 368.
Granite, researches in, 343.
Glauberite, from South Peru, described, 358.
Gümbel, Theodore, Esq., on the structure of agate, 359.

Hair, colour of, noticed, 329.
Hauslab, M. De, on the crystalline form of the globe, 165.
Horner, Leonard, Esq., on the discovery and analysis of a medicinal mineral water at Helwân, near Cairo, 284.
Huxley, Thomas H., Esq., on the identity of structure of plants and animals, 234.

Insects, a new method for destroying them, 369.
Iron, meteoric, Wöhler on the passive state of, 188.
Iron, Native Metallic, 358.
Light, Coralline, 368.
Light, influence of, on the colour of the Prawn, 368.
Lunar atmospheric tide, 186.
Lyell, Sir Charles, on fossil reptilian remains in the coal-measures of Nova Scotia, 215.

Malachite, formation of, 190. Artificial formation of, 190.
Mammalia, classification of, by Charles Girard, Esq., 167.
Matlockite, a new mineral species, described, 362.
Mauna Loa, James D. Dana, on the eruption of, 111.
Maury, Lieutenant, new views on navigation improvement, 154.
Meteorological observations made at Cumberland in 1852, 17.
Miller, J. F., Meteorological observations made by, at Cumberland in 1852, 17. On a singular irridescent phenomenon seen on Windermere lake, 83.
Minerals, paragenetic relations of, 85, 345.
Mollusca of the British seas, noticed by Professor Edward Forbes, 69.

Navigation, Lieutenant Maury's new views of improvement in, 154.

Ocean, changes of level of, in the Pacific, by J. D. Dana, 240.
Omerod, G. Wareing, Esq., on pseudomorphous crystals of chloride of sodium, 360.
Oxygen, amount of, in the world, 187.

Pendulum observations, by Alexander Gerard, 14.
Petermann, Augustus, Esq., on the Arctic relief expeditions, 159.
Phosphorescence, causes of, 274.
Plana, M., Esq., on the mean density of the superficial crust of the earth, 152.
Plants and animals, identity of their structure noticed by T. H. Huxley, Esq., 234.
—— sleep of, in the Arctic regions, 191.
Pressure, atmospheric, the annual variation in different parts of the globe, 123.
Proteus anguinus, some account of, 322.

Quatrefages, M., on a new method for destroying destructive insects, 369.

Rain-gauge, different varieties of, described by Mr Straton, 36.

XUM

Rammelsberg, Prof. C., on matlockite, a new mineral species, 362.
Remains, fossil reptilian, found in the coal-measures of Nova Scotia, described by Sir Charles Lyell, 215.
Rhind, William, Esq., on the laws which regulate the distribution of rivers, 56.
Rivers, the laws which regulate the distribution of, by W. H. Rhind, 56.
Rocks, classification of, 272.
——— structure of, 363.

Sabine, Colonel, on the figure and dimensions of the globe, 148.
Scleretinite, a new fossil resin, noticed, 359.
Secchi, Professor, on the distribution of heat at the surface of the sun, 150. On lunar volcanoes, 161.
Smyth, W. W., Esq., on pseudomorphous crystals of chloride of sodium, 361.
Sodium, chloride, pseudomorphous crystals of, 361.
Solar spots, periodic return of, 186.
Sorby, H. Clifton, Esq., on the origin of slaty cleavage, 137.
Spermatozoa, the penetration of, into the interior of the ovum, 326.
Straton, James, Esq., on the rain-gauge, 36.
Sun, distribution of heat at its surface, 150. Relation between the spots on, and the magnetic needle, 186.
Sutherland, Dr, remarks on currents in the Arctic seas by, 292.
Steam, extinguishing of fires by, 372.

Thomson, Dr A. S., on the discovery of a frog in New Zealand, 66.
Trevelyan, Sir Walter C., on the indications of glacial action in North Wales, 193.
Tsetse or zimb of South Africa, described, 192.

Ulex, M., on glauberite, 358.

Vegetation, experimental researches on, 370.
Ville, George, Esq., experimental researches on vegetation by, 370.
Volcanoes, lunar, a description of, by Professor Secchi, 161.
——— remarks on, by Dr Daubeny and Professor Bunsen, 276.

Windermere Lake, a singular irridescent phenomenon on, by Mr Miller, 83.

END OF VOLUME FIFTY-FIFTH.

Neill & Co., Printers, Edinburgh.
